PROFILE

A cybersecurity enthusiast with a keen interest in safeguarding digital landscapes, thrives on exploring the ever-evolving world of information security. Skilled in identifying vulnerabilities, analyzing threats, and implementing robust solutions, they are dedicated to protecting systems from malicious attacks. With a solid foundation in Linux, Network Security, and Data Privacy . Enjoys staying ahead of cyber risks by learning the latest tools and trends. Their commitment to continuous learning and problem-solving drives their ambition to contribute to a safer and more secure digital future.

EDUCATION

B.TECH(CSE)

University of Visvesvaraya College of Engineering (UVCE)
Bangalore
2024-2028

SKILLS

- **Languages** : Bash , C++ , C , Python
- **Soft Skills** : Problem Solving , Adaptability
- Computer Networking , Logic Flow
- Security(Offensive and Defensive)
- **Tools** : Burpsuit , Wireshark , Aircrack-ng , Ghidra
(Familiar with popular tools in Kali Linux)

EXPERIENCE

- 1.Bug reports(Critical issues and high severity also)
2. Friendly with CTF
3. Malware Analysis(Reverse Engineering,Understanding Behaviour)

CERTIFICATIONS

1. IIT-Guwahati cybersecurity Micro Credit Program (in progress)
- 2.Ethical Hacker-Cisco
3. Cybersecurity Analyst IAM - TCS (virtual training)
4. Introduction to Cybersecurity - Cisco Networking Academy
5. Introduction to critical infrastructure protection - OPSWAT Academy
- 6.Ethical Hacking - IISc Bangalore

PROJECTS(BEGINNER)

- 1) Lab Setup For Pentisting
Virtual Machine,Kali Linux.
- 2) secure web/internet browsing
Tor,VPN,Proxychains
- 3) Password generator and strength checker
c++,python

PROJECTS (INTERMEDIATE AND ADVANCED)

Encrypter & Decrypter – Secure Data Handling Toolkit

Developed a lightweight C-based utility for encrypting and decrypting files using AES-256-CBC for data confidentiality and RSA-2048 for secure key exchange. Integrated robust key management, including RSA key generation, AES key wrapping, and PKCS#1 OAEP padding. Enabled file I/O encryption, structured logging, and SHA256 integrity checks. Designed with OpenSSL for performance and compliance with security standards like GDPR, HIPAA, and PCI-DSS.

Technologies Used: C, OpenSSL (AES-256, RSA-2048, SHA256), File I/O, OAEP Padding, PEM Keys, Base64, Linux CLI

Securing the Perimeter – Network Architecture & Monitoring Implementation

- Designed a segmented enterprise network in VirtualBox with VPN, DMZ, and firewall layers to mitigate lateral movement risks and protect critical assets; implemented Zero Trust via Enclave Gateway segmentation.

- Deployed a SIEM solution using ELK stack and Filebeat for real-time log aggregation and threat detection; performed vulnerability assessments and secured exposed infrastructure components.

Technologies Used: VirtualBox, ELK Stack (ElasticSearch, Logstash, Kibana), Filebeat, Azure VM, VPN, Firewalls, Linux Networking

Security Assessment for CryptoV4ult – Full-Stack Infrastructure Audit

- Conducted end-to-end security assessment of a cryptocurrency platform, integrating Secure SDLC practices, identifying login system vulnerabilities, and remediating container-level CVEs using Trivy.

- Designed a threat matrix, implemented secure API practices (OAuth 2.0, input validation), and proposed risk-based mitigation strategies aligned with OWASP Top 10

Technologies Used: Trivy, Flask, HTML/CSS/JS, Heroku, OWASP Top 10, Bash, Apache, CVE analysis, Secure SDLC, Threat Modeling

Compliance Assessment – Enterprise Hardening & Cloud Security Strategy

- Performed OS hardening across Windows 10/11 and macOS systems; enforced NIST SP 800-53 and CMMC controls via policies on password strength, encryption, USB restrictions, MDM, audit logging, and vulnerability remediation.

- Developed cloud compliance policies including Windows server build sheets, BYOD, and email security; implemented CASB for visibility, threat protection, DLP, and regulatory compliance enforcement in cloud environments.

Technologies Used: Windows 10/11, macOS, Group Policy (gpedit.msc), Local Security Policy (secpol.msc), BitLocker, FileVault, MDM, VPN, CASB, NIST SP 800-53, CMMC Framework

Data Security Analysis – Governance, Confidentiality, and Compliance at JFin Payments

- Developed and enforced data governance policies including classification, regulatory mapping (GDPR, PCI-DSS, HIPAA), and access control; implemented AES-256 encryption, MFA, RBAC, and breach response procedures for protecting sensitive datasets.

- Ensured data integrity via SHA256 verification, audited VM security policies, proposed system hardening recommendations, and executed real-time/daily/weekly backup strategies aligned with data sensitivity levels.

Technologies Used: AES-256, TLS 1.2+, SHA256, RSA (2048-bit), Windows Group Policy, BitLocker, VirtualBox, RBAC, MFA, GDPR, HIPAA, PCI-DSS, NIST SP 800-53
